Software Engineer

Calnex is a world-leader in test and measurement solutions with over 350 customers in over 65 countries around the world. Based in Linlithgow, Scotland, the Calnex team has exceptional technical expertise. We develop a range of software enabled leading edge test equipment used to test networks and network equipment to the latest telecoms standards.

Our developers work in multi-discipline product development teams that include software and hardware design and system test Engineers. The teams work closely with marketing and sales, turning market and customer requirements into high quality, fully functional products.

Our R&D team is growing to support our expanding product portfolio and we have an exciting opportunity for an experienced Application Software Developer who will help shape the future user experience of our latest products that utilise web server and client technology.   The successful candidate will enjoy working within teams on the leading edge and be able to innovate and deliver in a fast paced and busy environment.

Key Responsibilities:
- Working with marketing to clarify and turn user requirements into UI and software designs.
- Estimating timescales based on an outline of the implementation and then developing and delivering quality software to those timescales.
- Contributing to the architectural development and evolution of the software to keep it flexible and maintainable as market requirements evolve.
- Support quality oriented activities necessary to deliver a product that will delight our customers.
- Learn the domain and hence appreciate the real life use cases of the product features.

Desired Skills, Experience and Qualifications:
- Educated to Degree level in one of Software Engineering, Computer Science or an equivalent subject
- At least **2** years' experience of full stack application software development using some of: C++, C#/.NET, HTML, JavaScript, TypeScript and CSS. Knowledge and experience of Angular/Angular-JS would be an advantage.
- Experience employing OO techniques and Real Time methods.
- Previous contributor to software architectures and user interfaces.
- Ability to work closely with others in a multi-discipline team.
- Demonstrated ability to respond to tight deadlines in a dynamic environment.

Calnex rewards success and provides a comprehensive benefits package that includes a contributory pension plan, flexible holidays, life assurance and critical illness cover, personal health care options and fitness classes.

A critical element of Calnex's ethos is to be a company that people enjoy working for and with. Personality fit and a positive attitude to both fellow employees and all other people that may be encountered while the individual represents Calnex will be a key attribute of the successful candidate.
